

The short content of the 12th opera: “Battlestar Galactica 2023.”

It is the year 2023. Our protagonists Eve and Peter still like each other a lot, and they still look well and young despite their age. They still live in the house at the seaside. They state that the human civilization is rushing towards its destruction. The use of the still more expensive, primitive and prehistoric energy from the fossil fuels, massive social inequality, injustice, the still growing uncontrolled power of a small group of people (from Wall Street for example Swordsmann and Koch, uncontrolled mafia corporations and the international financial institutions etc.); on one hand extreme disintegration on the other hand extreme globalization etc. Everything is also controlled by the useless and paradoxical market economy which is not based on the real values, but just on the possibility of placing on the market what is upside down comparing to what it should be, and that's why it is absolutely inhuman, bringing spiritual and physical devastation, nearly genocide. The market economy has got the only idol and “value” and that is the maximal profit, and when the profit is maximized by armament, drugs and “white flesh”, there is no chance that these factors will vanish.

Then suddenly three youngsters come to them. One of them is a bit older lady, the investigative reporter Jamie, and two young men Troy and Dylan. As they found out they were protagonists in the 1980.

(Note: Those are the three people from the unfinished TV sci-fi series from the 1980 “Galactica 1980”)

They started to have a hassle debate with a constant interrupting of each other, and everyone of them is trying to explain the same thing, that the mankind on the planet Earth is in a great danger from outside a space. (Note: From now on the story which is told by Troy, Dylan and Jamie mostly copies the story from the TV sci-fi series from 1978-1980 “Battlestar Galactica” and “Galactica 1980”; it is a little edited by the author of the libretto of course.) Troy and Dylan are the members of an advanced civilization which is just several centuries in front of the people on the planet Earth (from the evolutionary point of view they are also just homo sapiens-sapiens).

Not a long time ago they lived in a galaxy far away (not in a Milky Way), in their mother solar system (but also on the surrounding solar systems), and mostly on the planet Caprica. They have the same DNA as the human beings on the planet Earth, because in the ancient times, when on the planet Earth was just an early stone age, a much advanced civilization spread the colonies of the homo sapiens-sapiens into many galaxies. On the planet Caprica they developed the WARP technology, bending of the time and space for travelling between the stars and intergalactic travelling as well, the technology of the invisibility, and many other achievements which in the official reports from the planet Earth still don't exist. Capricans live a very long life; for instance Troy and Dylan are several hundred years old but they still look like young lads. They invented the superintelligent robots – Cyclons, when the problems began.

Cyclons wanted to secede and have the full rights. Capricans did not want to give it to them from the beginning, actually they gave it to them too late. The war began. Finally they came to a peace agreement and Cyclons moved to the planet far away. Fifty four years after that they invasively and insidiously attacked the planetary system where the Caprica belongs as well. They were helped by the Caprican named Gayus-Baltar who has joined Cyclons. The colony of the several millions Capricans started to run away in gigantic space ships (but Cyclons also killed millions of them).

After two years of travelling they travelled by the Earth in a hope that the human civilization is equally

advanced than Caprican's. Meanwhile a baby appeared on their space ship, a hybrid, because his mother was nearly at the level of the homo-angelus spiritus and his father was Caprican. When he was fifteen years old he already exceeded Capricans in intelligence. His name is Doctor Ze. He was terrified when he found out that the planet Earth is much more undeveloped comparing to their civilization, and in addition the ruling system on the planet Earth is profoundly antisocial system based on the pointless market economy. Everything is controlled by the small group of mafia-like anti-human rich men. On Caprice they have overcome this problem one thousand years ago. Until the invasion of the Cyclons the all planetary fair system existed there, with the all planetary leadership with a council of a wise men. Everyone had, by the all planetary constitution, the right for a dignified human life guaranteed. But here, the market economy for which the only idol and value is the maximized profit; and even if the maximal profit brings the armament, drugs and the white meat trade; there is still no hope that this will end up any time soon.

The civilization on the planet Earth hustles towards its destruction. If the human civilization will not create the principally different all-planetary social system centrally managed on the principles of the general solidarity and democracy, it will happen. So the circumstances turned the other way round: the planet Earth will not help the Capricans, but the Capricans will help the planet Earth.

The intergalactic colony of the Caprican's circles in the surrounding star systems concerns that Cyclons can appear any time. They are much more feared about the human civilization, because they would be totally defenceless against the attack of the Cyclons. There is a need of a quick, at least a partial development of the Earth's technology, and it needs to be done totally secretly even in front of the inhabitants on the planet Earth (to prevent the fall of the fragile human civilization), but mostly and mainly in front of the Cyclons. They secretly and eagerly start different activities. These secret envoys on the planet Earth, Troy and Dylan, with the help of the young investigative reporter Jamie get in touch with the several earthly scientists. Eventually the doctor Ze finds out that in a different galaxy there is a planet far away from Cyclons where they can move in; so they do it.

Twenty five years afterwards Cyclons found the new planet of the Capricans again. (Note: Another story telling of the Troy and Dylan matches with the sci-fi series with the same name "Battlestar Galactica" from the years 2005-2006, it is a little bit changed of course.) They developed (with the help of the Caprican and Cyclon nano-technology) the nano-beings, kind of the duplicates of the Capricans, who often don't even know that they are not the originals. One such a beautiful nano-lady, "number 6.", liaises with a son of the Gayus Baltar, the young Gayus who is a brilliant scientist. Gayus Baltar younger is a very contradictory and controversial personality, and womanizer as well. With the help of Gayus the nano-woman number 6. discloses the defensive coordinates for the Cyclons. Another massacre occurs. The original Capricans are decimated and the rest of their civilization is on the road again; this time to a different planet where sometime their bloodline relatives (with the same DNA) lived. After another two year odyssey they find a planet that they were looking for, but already about one thousand years ago destroyed by different Cyclons, which were invented by their inhabitants. They also find another unsettled planet where they settle, but this time the number 6. joined people, and she is expecting a baby with Gayus Baltar younger.

It takes another sixteen years when the Caprican's observers report that they were discovered by the Cyclons again, and even worse, they also discovered the planet Earth which they want to get.

The situation considering Cyclons is much more complicated now. There are three groups of them. First are the original invasive evil Cyclons who want to annihilate the life on the planet Earth. Second, the most numerous group, is less aggressive and includes many humanoid nano-beings. It would be able to negotiate the peace with them. Third is a small group of the hundred percent humanoid nano-cyclons, human. This third group wants to definitely live in the peace with humans which would be mutually beneficial. The second group will live in peace but only in the conditions if on the planet Earth inhabited by the people rules the all planetary, united, human, social, fair system, and where the newest inventions of the scientists are available for every being on the planet, and where the technology is so far ahead that the so called "good" Cyclons can rely on it in the war against the "evil" Cyclons. However this seems to be a problem. On Earth doesn't rule the all planetary, fair social system and the evolved technology exists, but it is secretly kept in the underground laboratories and available just for a few, perhaps 70-80 people. All the other technology used on the whole planet is obsolete, even antediluvian, energetically based on the fossil fuels. In addition the vast majority of the inhabitants is gradually pushed to a spiritual decline and devastation, even to a spiritual (maybe even physical) genocide under the influence of the devastating pop culture.

What to do now? Doctor Ze was visited by the relatives of his mother, nearly purely light energetic beings, who disclosed to him that there is a couple living on the planet Earth, Peter and Eve, who have gone through the certain type of mutation so they should be able to help Dylan and Troy. Doctor Ze found out that on the planet Earth a very sophisticated technology already exists. It was worked on in the earthly years 1898 – 1943 by the brilliant scientist Nicola Tesla, but mostly on a paper and in the equations. Meanwhile some of it got into the hands of the horrible Nazis (project Bell, the foot-fighter, Sroder-Stanc), who luckily did not know how to fully use this technology, and part of it into the hands of the Soviet, but they keep it as a top secret. After his (probably violent) death in the earthly year 1943 part of his remains together with to the USA removed unfinished Nazi technologies and a group of the Nazi scientist got into the top secret underground laboratories (Area 51, HAARP, under the Bermudas, the opposite side of the moon and perhaps on the planet Mars). Tesla probably worked on such equations and calculations which outrun the progress of about 100 -150 maybe even 200 years. All of this he did in a secrecy because he considered mankind morally unstable for adopting such a sophisticated science and technology.

Tesla probably worked on (since 1898 until his death in 1943) the quantum gravity (the antigravity machine with an elimination of the G power), on the theory of the scalar field and the quantum interconnection (the possibility of the teleportation), on the equations of reducing the effects of the second law of the thermodynamics (perpetuum mobile), on a technology based on the ELF (the extremely low electromagnetic frequencies), on the radiation (the control of weather but also a super weapon, that is induced earthquakes, annihilation and demolition from the distance etc.), on the principles and equations of the morphic field of the population and individuals (possibilities of the distance control of the human mind of a concrete person), on the equations of the negative energy (free energy for the people, free travelling, free producing, space travel), on the equations of the vacuum energy and the energy of the Higgs field (free energy available) and so on. Lastly he was deeply religiously convinced and he wanted to create kind of a paradise on Earth – "God's kingdom". Besides that he developed many technological principles between 1885-89 which were already realized but often

with 50-80 years delay and often under different names (a global network of the camera mobile phones was already in 1898, TV, network, fax, microwave, scanner, the magnetic resonance diagnostics, the radar and anti radar, the principle of the integrated circuits – microchips, the sketch of the particle accelerator, hologram, laser etc) i.e. uncountable technological achievements.

Many earthly scientists while he was alive said that: “He is the one who created the whole twentieth century”. Unfortunately today is his name and his work almost totally forgotten. Better said, it is buried in the top secret underground laboratories on the planet Earth but probably on the surrounding planets as well. A group of the top secret agents took care of that in the interest of the “devilish” leaders from the mafia-like financial institutions (Koch and Swartz from the Wall Street, the international corporations), i.e. in the interest of the still smaller group of people who dominates the whole planet Earth. The post Tesla’s technology (distance mind control, the ELF radiation) was several times used just in the interest of evil (Henry Lee Oswald, 11th September or experiments on the people in Nome town in Alaska).

Doctor Ze further suggests that the small group of people (Troy, Dylan, Jamie, Peter and Eve) infiltrates into the top secret laboratories of the post Tesla’s technology and declassifies it step by step. So now the five member group conspirative way infiltrates into one secret basement under the rocky mountains during an intense storm evoked by the Caprican technology. They bring the whole technology but mainly the technology based on the morphic field, i.e. with a possibility of controlling the mind of the individual and population. What they found out is that this technology will be used for the good and human purposes just in case if it is dealt with the real human beings and even that only if they have got one of the basic characteristics – conscience. Doctor Ze bases this on the thoughts of the philosopher-priest from a little state called Slovakia, a bishop Bezak; who claimed in his works that if the person doesn’t have conscience it is not human anymore and it is in a bondage of the daemonic powers. This is the main reason why was Bezak suspended. If the person concerned was under the influence of the sins of pride, avarice and enviousness as well as under the influence of the extraterrestrial “daemonic entities”, it stopped being a human being and then this technology will not affect him or her. They will operate only in the service of evil, and these already inhuman beings will become even worse and more selfish.

They summon a meeting of the most significant scientists on the planet Earth: Susskind, Michio Kaku, Gerard 't Hooft, Tegmark, Turok, Bart, Hawking, Fran de Aquino, Sipov, Kozyrev, Searl, Frank Tipler etc., from whom many arrive. While they are listening about the Tesla’s equations, they are astonished how far ahead Nicola Tesla was in that age in the science. Not for nothing even Einstein called him “The Great Lord of Science”. They work out another strategy. They are supposed to radiate all of the good people with a help of the electromagnetic resonance in the interest of the higher goodness, so they will be able to get to the higher level of the positive energy, and to make these people morally and spiritually uplifted, so they would get rid of the degrading level of the pop culture and eventually refuse it. Simultaneously they will start fighting together under the influence of the positive energy for the equitable society on Earth based on the principles of the all planetary constitution and for the leadership of the planet Earth. Troy and Dylan are beginning to launch Tesla’s technology with a purpose of creating a better earthly society. Even more importantly, if it ends up in a fight with Cyclons, the middle group of the Cyclons needs to see that on Earth the fair all planetary social system rules.

Other scientists will start working according to the Tesla's equations and also on their own calculations on the super weapons which would be able to defend people against the evil Cyclons, and to persuade the middle class that the human civilization is worth protecting. Our five protagonists watch it all from the distance using the Caprican technology.

They see that all around the world in the cities and capital cities people started to gather demanding the fairer all planetary social system. These gatherings gradually turn into some kind of carnivals and happenings. The biggest happenings occur in front of the OSN (ESN) building and in front of the White House. The American president and the majority of the OSN leaders welcome the gathering but some of the president's counsellors or the OSN members are fundamentally against it. In the gathering are according to the example of our relatives from the planet Caprice gradually formulated basic requirements:

There is a need to create the all planetary constitution, create a system of the United Nations of the World based on the catholic-democratic principles as well as on the principles democratically-muslim (sonot military or orthodox), and the Judaic principles. There is a need to create the all planetary elected, controllable and resignable world government compositing of the council of the wise men. To create the all planetary constitution which guarantees the basic human and social (with an emphasis on the word social) rights for all the people on the planet Earth. Create the principles of the all planetary plebiscite. The most influential personalities of the international financial institutions as well as the international corporations have to be all planetary electable, controllable and resignable. It is necessary to create a strong all planetary absolutely independent army, stronger than the armies of the individual states (including USA), which will be governed by the all planetary council only, and which will intervene in the case of the unrighteousness, killing or genocide (for example against the militant Islamic extremist). Obviously this army mustn't use the deathly weapons, just paralyze the enemy or put him into the coma. Enemies then have to be gathered in the reeducation centers, where their minds will be the maximally human way turned over to the Christian or Muslim democrats.

The whole gathering gradually changes into a happy carnival. Music plays everywhere, bands, people dance in groups and chant their main demands. Just in Washington there is over three millions of people in the streets. The American president speaks out and welcomes the gathering and its demands. Later, partly freely and partly violently the representatives of the gathering capture the palace of the OSN. Here they create the foundations of the interplanetary government and the other institutions, like the institution of the whole planetary plebiscite, the all planetary social rights, the international army etc., which were summarized in the demands of the people gathered. The representatives of the Christians, the Muslims, the Judaist, the Atheists and the Democrats speak on a balcony one by one. The crowd welcomes them eagerly. The whole world's "tender revolution" happens, but it is also partly based on the idea of the "Czechoslovakian spring" in 1968.

It is getting dark and notable fear and smother is in the air. The evil powers will not give up with such an easiness and probably they'll attack. It will be a horrible night, the tension is felt everywhere. Very soon the army of the masked men without label arrives. Perhaps it is the secret international group of thugs in the service of the mafia-like corporations and the financial institutions who are secretly kept as a backup in critical situations. A helicopter appears and the voice from the amplifier calls the crowd to empty the OSN building and to break up immediately. Nobody moves. Then suddenly on the balcony of the

OSN building a speaker appears, who announces that the OSN building belongs to all the people from the whole world and he represents the mankind of the planet Earth. He is shot down immediately. The shooting repeats but this time from the crowd and the helicopter is shot down. The voice from the amplifier repeats the command to obey, otherwise they will start shooting into the crowd. (The five member group is terrified because there are many mothers with their children in the crowd.) The masked men show themselves, they look like they are in the Nazi uniforms. The situation is in the most critical line – “quater limits”. Then the president speaks out and announces that the army which surrounded the OSN building isn't legal and he sends the regular American army against them for the protection of the human rights like Kennedy did eighty years ago. A quick shoot-out happens, the masked men retreat and they are captured. The gathering is celebrating the victory. Troy and Dylan state that it will take some time until the requirements will get into the function; until it will be possible to declassify and show the whole Tesla's technology the way that the disintegrated and the super-globalised economy won't collapse. Very soon a message comes that the middle group of the Cyclons joined the protection of the planet Earth and the evil Cyclons run away into a different galaxy.

In the end all of the protagonists meet at the seaside when the Cyclonian viper arrives and a beautiful young couple comes out of it with a baby girl, their child. It is Gayus Baltar younger with his spouse, number 6., and their beautiful daughter. Then another viper comes and a very old but good-hearted couple gets off, the honourable commander Adama (the son of the commander Adama from the Battlestar Galactica 1978-1980), and the ex-president of the refugees from Caprice. Then the third viper comes from which still young looking Starbuck gets off known from the years 1978-1980 and also his daughter, a beautiful wife Starbuck known from the years 2005-2006. They emotionally greet each other and then farewell.
